designed for better sleep

# USER MANUAL

The door frame clamp is designed to hold a baby hammock, twin baby hammock or cradle - with or without a cradle bouncer.

The door frame clamp is placed above both sides of a door frame.

The maximum width of the door frame holding the door frame clamp is 25 cm (9.8 inches).

No more than 20 kg (33 lbs.) may be hung from the door frame clamp.

Check that the clamp is firmly in place before hanging a baby hammock, twin baby hammock or cradle.

## HEIGHT

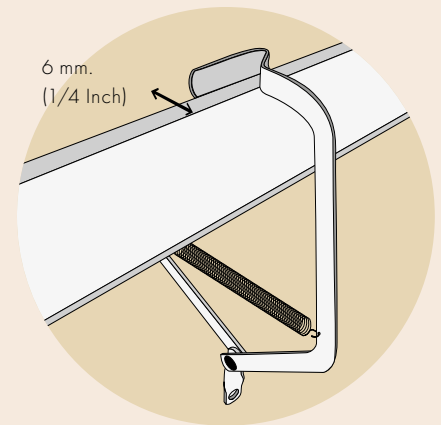

Ensure that your baby hammock, twin baby hammock or cradle never touches the floor while hanging from the door frame clamp.

You will find the correct height by stretching out your spring as far as possible. When the spring is fully extended, space must remain between the bottom of the baby hammock, twin baby hammock or cradle and the floor.

Some door frames, unfortunately, are not tall enough to accommodate a baby hammock, twin baby hammock or cradle with a motor. When checking the height of a door frame, be sure that space remains under your baby hammock, twin baby hammock or cradle when the spring is fully extended.

In general, you need 220 cm / 7.2 feet between the floor and the top of the door frame to accommodate baby hammock, twin baby hammock or cradle with a motor.

If there is a doorstep, the 220 cm / 7.2 feet go from the top of the door frame to the doorstep.

### Please note

The door frame clamp must be mounted on a vertical wall above the door frame. The door frame must fit snugly against the wall, extend horizontally from the wall and must be at least 6 mm (1/4 Inch) deep on both sides.

Make sure the door frame clamp is fastened correctly and that no cords are routed over the door frame.

### Other questions?

Moonboon has provided answers to these and many other questions online. Click on the link below or scan the QR code to see the list.

# SAFETY CHECKLIST

Carefully read the safety checklist below. Once you have gone through the list and made sure everything is as described, you may start using the door frame clamp. Enjoy!

- The door frame clamp may be mounted on a door frame no wider than 25 cm / 9.8 inches.
- Check that the accompanying safety carabiner is closed and locked correctly every time you use the door frame clamp.
- The door frame clamp must not be used if rust appears on its spring or if any other damage becomes visible.
- Moonboon's door frame clamp has been developed to work with Moonboon's baby hammock, twin baby hammock and cradle - with or without the Moonboon Motor. If you use a similar products from a different brand, we can't guarantee that they can be mounted properly or will function correctly.
- Contact Moonboon concerning new components or if any parts are missing. **NEVER REPLACE** original parts with other components.
- Only mount a baby hammock, twin baby hammock or cradle with original parts. Avoid using alternative parts of hanging the products.
- Stop using the door frame clamp if there are visible damages to the metal parts.

## Please note

Make sure to check regularly that the door frame clamp meets all safety requirements.
