

User manual

# Tripod Stand for Baby Hammock

Important: Read the user manual carefully  
and keep it for future use.

## What is included?

- 1 top assembly
- 3 connecting leg pipes
- 3 connecting leg pipes with finished ends ("feet")

## Assembly

The stand is designed to hold a hammock or a hammock with a motor. The stand will hold a maximum of 15 kg (33 lbs).

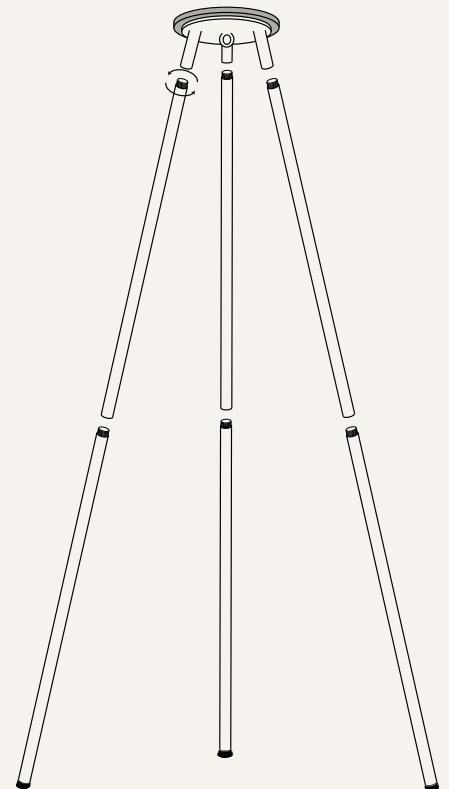

The stand is easily assembled, and no tools are needed.

- 1 Start by twisting together the legs. Each leg consists of 2 pipes. The lower one is the one with a "foot". Ensure that the pipes are firmly twisted together.
- 2 Now attach the 3 legs to the top assembly. Ensure that each leg is firmly twisted into the top assembly.
- 3 Adjust the "feet" so that they point outward from the stand and stand firmly on the floor. Place the legs as far apart as possible to achieve the maximum balance.
- 4 Now hang the hammock and, if applicable, the motor, on the stand. See the next section for details.

### Please note

The stand may only be placed on a flat floor. Maximal permitted slope of the floor is 0.15 degrees.

Requirements for flatness are max. 2 mm (1/16 inch) measured at 2 meters (6.5 feet).

# Mounting

## Hanging the hammock

Connect the hammock spring to the hook of the stand with a safety snap hook. Do not use any chain with the spring or the hammock.

Please read the user manual for your baby hammock thoroughly.

## Mounting the hammock motor

The stand is custom designed and tall enough to hold a hammock and a hammock motor.

First, attach the motor to the hook of the stand using a carabiner.

Then, attach the spring and then the hammock under the motor using another carabiner.

Both carabiners are to be oriented with the narrow end pointing to the motor. Check that the carabiners are locked properly.

Ensure that the power supply cord to the motor is kept away from the hammock and the stand.

Please read the user manual for your motor thoroughly.

## **Please note**

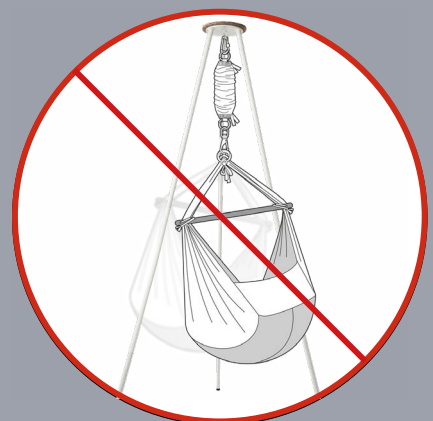

It is important to use a stainless steel safety snap hook without coating.

## **Please note**

Moonboons stand has been developed to work with Moonboons baby hammock and motor. If you use a baby hammock and/or motor of a different brand, we can't guarantee that it can be mounted properly or will function correctly.

# Important!

Never push the hammock back and forth, sideways or otherwise use it as a swing while it is hanging in the stand. This applies both with and without use of a baby hammock motor.

# Transportation

---

The stand is easily disassembled for transport. Clear items from the hook of the stand, and turn the stand on its side. Now untwist the stand pipes for carrying.

Please note that the internal threaded rods are not fastened to the legs and can become loose when the legs are unscrewed. They will fasten again when the legs are screwed back together.

## **Please note**

Never move the stand while your baby is in the hammock.
